

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

projection in atlases of physical geography or for statistical purposes and has the advantage over Mollweide's in that its representation of the shape of countries far east and west of the central meridian is not so distorted because meridians and parallels are not so oblique to one another.

By employing the meridian of Greenwich as a central meridian, the continental masses can be mapped where the projection is at its best and the greater distortion transferred to the Pacific Ocean.

RETIREMENT OF CIVIL SERVICE EMPLOYEES

The act providing for the retirement of civil service employees is now effective. It applies to employees who have been in the classified service 15 or more years and who have reached the age of 70 years (65 years in the case of mechanics). Employees eligible for retirement are divided into six classes depending on length of service, and the maximum and minimum annuities in each class are specified by law, being contingent on the average annual basic salary for the last 10 years of service. The classes, maximum rates and annuities are as follows:

- A. Service, 30 years or more; annuity, 60 per cent. of salary; maximum, \$720; minimum, \$360.
- B. Service, 27 years; annuity, 54 per cent. of salary; maximum, \$648; minimum, \$324.
- C. Service, 24 years; annuity, 48 per cent. of salary; maximum, \$576; minimum, \$288.
- D. Service, 21 years; annuity, 42 per cent. of salary; maximum, \$504; minimum, \$252.
- E. Service, 18 years; annuity, 36 per cent. of salary; maximum, \$432; minimum, \$216.
- F. Service, 15 years; annuity, 30 per cent. of salary; maximum, \$360; minimum, \$180.

Employees to whom the retirement provisions of the act apply shall, within 90 days of the passage of the act or within 90 days after reaching the retirement age, be automatically separated from the service. In cases where the responsible administrative officers certify to the Civil Service Commission that employees who have reached the retirement age but by reason of efficiency and willingness to remain may be advantageously continued in the public service, such employees may be retained for successive terms of two years.

Beginning with August 1, 1920, there will be withheld each month $2\frac{1}{2}$ per cent. of the basic salary of each employee in the classified service.

THE MEYER MEMORIAL MEDAL1

FRANK N. MEYER was an agricultural explorer in the Office of Foreign Seed and Plant Introduction, Bureau of Plant Industry, U.S. Department of Agriculture. For thirteen years he searched through China, Turkestan and other parts of Asia, for plants which might be valued additions to American agriculture and horticulture. When he lost his life on the Yangtze River in 1918, he left a bequest of a thousand dollars to the staff of the Washington Office. The individuals of the Office have put the bequest into a permanent tribute to his memory, in the shape of a medal, designed by Theodore Spicer-Simson, which is to be awarded for distinctive service in plant introduction. The awards are to be made by the Council of the American Genetic Association.

The first award was made on May 3, 1920, when the medal was presented to Mr. Barbour Lathrop. Dr. David Fairchild, in behalf of the Council, presented the medal. Mr. Lathrop had a large part in the founding of the Office of Foreign Seed and Plant Introduction, and has been intimately connected with it since. He and Dr. Fairchild comprised one of the first exploration expeditions, and visited the West Indies, South America, Europe, Egypt, India, Ceylon and the East Indies. Many introductions now growing in this country were secured on this and subsequent trips which Mr. Lathrop conducted and financed. The first seed of the Egyptian cotton, the culture of which now amounts to \$20,000,000 a year in Arizona, was brought in by them. The tropical mangos, now an industry in Florida; the Persian Gulf dates, peculiarly successful in the Imperial Valley; Sumatra wrapper tobacco, now famous in Connecticut; the first large collection of Japanese flowering cherries; Rhodes grass, which has been called the timothy of the
